## POSITION PAPER

EU Transparency Register: 599743711223-32

<p style="text-align: center;"><b>CECAPI position on Electronic displays ENER Lot 5 + part ENER Lot 3</b></p>
---

<p><b><u>EXECUTIVE SUMMARY</u></b></p>
--

<p>CECAPI would like to highlight its position regarding the implementation of possible Ecodesign and Energy Labelling requirement for electronic displays into the Ecodesign Framework Directive 2009/125/EC.</p>
--

<p>CECAPI supports the inclusion of TVs and computer monitors for domestic and office applications in the scope.</p>
--

<p>CECAPI thanks the Commission for having reconvened the Consultation Forum following the public consultation of the better regulation platform and for the possibility to make further comments on the proposal.</p>
--

<p>CECAPI welcomes the proposed changes to the draft regulation for eco-design requirements and would like to see video door entry system displays clearly excluded from the new directive, in order to have a clear situation in the market</p>
--

<p>CECAPI therefore would like to see the following additional Commission's proposed scope exclusions introduced in the final text:</p>
---

<ul style="list-style-type: none"><li>- Displays integrated into equipment where the main function is status display or control and function activation and video door entry system displays;</li></ul>
---

**Rationale:**

CECAPI believes that video door entry systems displays have the main function of showing the status or control and activation.

In our opinion they could risk to be considered as not included in this category and considered as TV.

For the above reason, in order to make a clear situation in the market, we proposed the above new text.
